REMARKS

Reconsideration of this application is requested in view of the amendments to the specification and claims and the remarks presented herein.

The claims in the application are claims 34 to 42 and 49 to 56, all other claims having been cancelled.

The present amendment to the specification adopts the Examiner's suggestion and claim 36 and 49 to 52 have been amended to overcome the Examiner's objections thereto.

Applicants are submitting herewith a new paper concerning the computer diskette of the paper form which is believed to be acceptable. With respect to Figs. 13, 14 and 15, Applicants wish to draw the Examiner's attention to the drawings presented in the PCT Patent Applications stating on Figures 13, 14, 15 and 16 that three immunization treatment have been performed, the first after 3 weeks after the first shot, the second four weeks after the second shot and the third one two weeks after the third shot and is therefore believed to be proper.

As regard to claims 54 to 56 newly added in the amendment of July 14, 2005 it has to be expressly stated that these compounds were already disclosed in the specification and in the examples. They are starting materials for producing the compounds of formula I and they have no other utility. Therefore these claims do not

open any other issue. It is not a new added matter and they were previously defined in process claim 32 as diaminoalcohol of formula II, or as ω -hydroxy aminoacid of formula III or dipeptide like compounds of formula IV. No restriction has been required and therefore, it is noted only one invention is present.

In view of the amendments to the specification and claims and the above remarks, it is believed that the application is in condition for allowance. If there are any minor matters remaining, the Examiner is requested to telephone the undersigned at (212) 302 8989 to settle the same by Examiner's Amendment.

Respectfully submitted, Hedman and Costigan
